020 Positions
Risk
Monitor

A new frame that displays the positions in the current account, categorized by product, and their quantities adjusted with Delta.

The screenshot shows the 'Positions Risk Monitor' window. At the top, there are controls for 'Underlying' (set to 'AB'), 'Update volatility with' (set to 'Settle'), 'Rate Of Interest (%)' (set to '3.65'), and 'Model' (set to 'Bjerkund-Stensland'02'). Below these is a table with columns for 'Instrument', 'Futures Net Position', 'Buy Call', 'Sell Call', 'Buy Put', and 'Sell Put'. Each of these columns has sub-columns for 'Quantity', 'Delta', and 'Adj Qty'. The table lists various instruments including '3AN-27 C1925', 'FEB-27 C1925', 'MAR-27 C1925', 'APR-27 C1925', 'MAY-27 C1925', 'JUN-27 C1925', '3AN-27 P1525', '3AN-27 P1550', '3AN-27 P1725', and 'FEB-27 P1525'. At the bottom of the table, there are summary rows for 'Futures Net Position', 'Options Net Position', and 'Total Net Position'. Below the table, there are input fields for 'Delta', 'Gamma', 'Theta', 'Vega', and 'Rho', and a section for 'Aggregates' showing values like '~2.92' for Delta and '~0.41' for Gamma. The 'Estimated Profit' is shown as '-4920.00' in the 'USD' currency.

The frame provides ways to control how the Greek Values are computed

Update volatility with Rate Of Interest (%) Model

It displays the aggregate values and the estimated profit, in the desired currency:

	Delta	Gamma	Theta	Vega	Rho
Aggregates	~2.92	~0.41	~-0.00	~0.13	~0.43
Estimated Profit	-4920.00 USD
